

QUALITY POLICY

ATT.1 TO THE MANUAL ED-05-Rev00

REV.0 del 12/06/2025

KASCO S.r.l., a company based in Reggio Emilia and active in the respiratory protective equipment sector since 1977, considers quality a core value of its identity and a strategic element for ensuring customer satisfaction, end-user safety, and the sustainable growth of the organization.

Management recognizes that achieving high standards at every stage of its business—from design to production, from supply chain management to marketing and after-sales support—is only possible through an effective quality management system, inspired by the principles of continuous improvement, defect prevention, and active listening to market needs. With this in mind, **KASCO S.r.l.** is committed to maintaining constant compliance with applicable regulations and ensuring the technical and functional reliability of its products, designed and manufactured to meet the protection needs of a variety of professional contexts, including high-risk ones.

The company promotes an organizational culture based on informed employee participation, internal skills development, process efficiency, and the accountability of every corporate function towards shared goals. At the same time, it maintains a robust performance monitoring system, which allows for the evaluation of the effectiveness of actions undertaken and the timely identification of areas for improvement.

In keeping with a modern and responsible corporate vision, KASCO S.r.l. integrates into its strategy a focus on the environmental impacts of its business activities and its contribution to the fight against climate change. Awareness of the impact that global environmental dynamics can have on the protective equipment sector drives the organization to design increasingly sustainable solutions, adopt resource-efficient production practices, and collaborate with suppliers and partners along the entire value chain to reduce its overall environmental footprint. This commitment to sustainability translates into a desire to innovate not only in terms of the technical performance of its devices, but also in their durability, recyclability, and compatibility with the principles of the circular economy.

This Quality Policy represents a constant reference for all company decisions and is periodically reviewed to ensure its consistency with strategic objectives, stakeholder needs, and changes in the internal and external context.

Reggio Emilia, 12/06/2025
